Server details
Enter required settings for this server, including providing a name and location. This server will be created in the same subscription and resource group as your database.
Server name *
abhiroy
.database.windows.net
Server name should not contain reserved words.
The specified server name is available.
Your server name can't start or end with hyphens '-', nor can it have two hyphens '--' in third and fourth places of the name.
Location *
(US) East US
Authentication
Azure Active Directory (Azure AD) is now Microsoft Entra ID. Learn more
Select your preferred authentication methods for accessing this server. Create a server admin login and password to access your server with SQL authentication, select only Microsoft Entra authentication Learn more using an existing Microsoft Entra user, group, or application as Microsoft Entra admin Learn more, or select both SQL and Microsoft Entra authentication.
Authentication method
Use Microsoft Entra-only authentication
OK

Configure network access and connectivity for your server. The configuration selected below will apply to the selected server 'abhiroy' and all databases it manages. Learn more
Network connectivity
Choose an option for configuring connectivity to your server via public endpoint or private endpoint. Choosing no access creates with defaults and you can configure connection method after server creation. Learn more
Connectivity method * ⓘ
No access
Public endpoint
Private endpoint
Connection policy
Configure how clients communicate with your SQL database server. Learn more
Connection policy ⓘ
Default - Uses Redirect policy for all client connections originating inside of Azure (except Private Endpoint connections) and Proxy for all client connections originating outside Azure
Proxy - All connections are proxied via the Azure SQL Database gateways
Redirect - Clients establish connections directly to the node hosting the database
